ABOUT ME

I am a Full-Stack Developer experienced with MVC design pattern, building and retrieving data from APIs and creating scalable web-applications. I have created multiple web and console applications ranging from simple calculators to intricate web-applications integrated with databases. I am very passionate to learn something new every day. I encourage you to check out my links!

SKILLS

- C#
- HTML
- CSS
- MySQL
- TSQL
- .NET

I also have some knowledge in Javascript and Bootstrap.

EXPERIENCE

FLOWERPLANET WEBSITE

Flowerplanet is an ASP.NET Core MVC project where I created a social-media-like website that gives users the ability to join or create plant-lover clubs and shows in their respective states and cities.

TACOPARSER CONSOLE APP

In this project, I created a console app that combs through all the Taco Bell locations from a CSV file. Once the app parses the location information, it will display the two furthest Taco Bell restaurants by name and also by distance in mileage.

MR.WEATHERMAN CONSOLE APP

Mr.Weatherman man is a console application in which I used the OpenWeatherAPI to display the weather of any city and state using a given API key.

EDUCATION

SECONDARY SCHOOL

TrueCoders Software Engineering
2022
